STEP 13 KEEP DOOR OPEN WHEN TESTING THE OPERATION

OPEN THE DOOR

CLOSE THE DOOR

HANDLE TRIM

To prevent build-up of surface contaminants, possibly resulting in hardware surface deterioration; we recommend to wipe down with soft cloth all visible surfaces with warm water and mild soap. Then wipe the same surfaces with a clean cloth and warm water only and let surfaces dry completely.

For all finishes, it is strongly recommended to apply a non-abrasive automotive wax to protect the surface.

This procedure should be done a minimum of 2 times per year.

MULTIPOINT DOOR LOCKS

In order to ensure the smooth operation of the lock over a long period of time, it is necessary to lubricate all movable parts and locking points using acid and resin free lubricants.

The use of caustic cleansers or chemicals should be avoided.
